COMPOSTING PROCESS MUSCLE WITH ENZYME BK PARTNER & S-POWER

FOLLOWING JAPANESE PROCEDURES

BISO
JICA

INGREDIENTS FOR PREPARATION

- Fermentation initiator:
  - 100ml BK Partner
  - 100ml S-Power Men's Hair Mask (Japan)
  -
- Carrier (enhancer):
  - 1 glass of sugarcane juice or sugar (if accessible)
- Water: Approximately 100–150 liters (maintaining humidity levels of 40–50%)

*Depending on the ingredients, varying amounts of water may be required.

- Organic waste: 5 tons (straw, manure, sugarcane bagasse, coffee husks, etc.)

JICA

STEPS TO EXECUTE

Step 1: Prepare the yeast solution.

- Combine 50ml of BK Partner with 50ml of S-Power and a starter culture, ensuring thorough mixing with 100-150 liters of water.

- Incorporate sugarcane juice or sugar (1 cup) if accessible.
- Dissolve this mixture in a suitable quantity of water to achieve a moisture content of 40–50% of the total mixture.

B2: Activation of enzymes

- Allow the mixture to rest for 3 to 6 hours to activate the microorganisms and enzymes.

B3: Apply to the substrate.

- Utilize a spray bottle or uniformly distribute the prepared solution over the entirety of the 5 tons of organic residue.

B4: Securely seal

- Secure the compost pile with a tarp.
- Composting duration: 15 - 20 days.
- After this period, uncover the pile and mix it thoroughly. Combine 50ml of BK
- Partner and 50ml of S-Power with 20 - 50 liters of water, adjusting based on the current moisture level (you may incorporate 1 - 5 liters of Daichi No Tomo 500).
- Reintroduce it into the growing medium and mix thoroughly once again.

B5: Proceed with fermentation

- Allow it to compost for an additional 40 to 60 days until the materials are fully decomposed.

After 40 days, you may stir it again if it has not yet been utilized.

FINISHED PRODUCT

Well-composted organic fertilizer is nutrient-dense and can be utilized to nourish plants after a composting period of 40 to 60 days.
